

Woodlands

Name two animals and insects that are mostly found in the woodlands habitat

- Fox
- Blue jay
- Woodpecker
- Owl
- Mice
- Squirrel
- Ants
- Dragonfly

What types of trees and plants can grow in the woodlands?

- Moss
- Vines
- Grass
- Berries
- Maple tree
- Oak tree
- Pine tree
- Evergreen tree

How is light an important factor in the growth of the woodlands?

- The amount of light penetrating through the main leaf canopy and reaching the woodlands floor
- More light available beneath the trees, the greater the number of plant species which will also be able to grow within the woodland

How is tree spacing determined in woodland?

- Tree spacing is determined naturally as a result of competition between individual tree seedlings for necessities such as space, light, nutrients, and water.

Why are woodlands important to the environment?

- Provides animals homes
- Give us oxygen
- Give us freedom
- Give us time outside
